

Chapter 1. Introduction

This sample document is used at image build time to download and warm up the Docling layout models and the Voyage tokenizer.

It has headings and plain paragraphs so the hybrid chunker produces chunks.

Chapter 2. Details

The container runs with `HF_HUB_OFFLINE=1`, so every model must be in the image.
Do not delete this file: `Dockerfile.vercel` runs `python -m src.ingestion.prefetch`.
